- Cytoskeleton reorganisation/disorganisation is a key feature of the cell memory for defence to successive pathogen attack
- Bioassimilable sulfur provides effective control of *Oidium neolycopersici* in tomato enhancing plant immune system
- Screening water extracts and essential oils from Mediterranean plants against *Verticillium dahliae* in olive.
- Identification of fungal species associated with branch dieback of olive and resistance of table cultivars to *Neofusicoccum mediterraneum* and *Botryosphaeria dothidea*.
- *Metarhizium brunneum* and *Beauveria bassiana* release secondary metabolites with antagonistic activity against *Verticillium dahliae* and *Phytophthora megasperma* olive pathogens.
- Variability in susceptibility to Anthracnose in the world collection of olive cultivars of Cordoba (Spain).
- Morphological, pathogenic and molecular characterization of *Colletotrichum acutatum* isolates causing almond Anthracnose in Spain.
- Detection of latent infections caused by *Colletotrichum* sp. In olive fruit.
[10.1111/jam.13610](https://doi.org/10.1111/jam.13610).
- Resistance to *Phytophthora cinnamomi* in *Castanea* spp. is under moderately high genetic control mainly because of additive genetic variance
- Brassica-based seedmeal biofumigation to control *Phytophthora cinnamomi* in the Spanish "dehesa" oak trees
- Characterization of an *Aspergillus flavus* population from Argentina and its potential use as biocontrol agents for mycotoxins in maize
- *Didymella glomerata* causing leaf blight on pistachio
- First report of black rot on apple fruit caused by *Diplodia seriata* in California
- Fungal communities associated with almond throughout crop development: implications for aflatoxin biocontrol management in California
- First report of anthracnose caused by *Colletotrichum fioriniae* and *C. karstii* in California pistachio orchards
- Elucidating the mechanism of action of Copper heptagluconate on the plant immune

Publicaciones grupo AGR-216 Patología Agroforestal

system against *Pseudomonas syringae* in tomato (*Solanum lycopersicum* L).

- Survey, identification and characterization of Cylindrocarpon-like asexual morphs in Spanish forest nurseries
- Phenotypic, molecular and pathogenic characterization of *Phlyctema vagabunda*, causal agent of olive leprosy
- Evaluation of organic amendments from agro-industry waste for the control of verticillium wilt of olive.
- Nitrogen status affects growth, chlorophyll content and infection by *Fusicladium oleagineum* in olive.
- A long-term study on the effect of agroclimatic variables on olive scab in Spain.
- First Report of *Fusarium pseudograminearum* causing crown rot of wheat in Europe.
- Preliminary selection and evaluation of fungicides and natural compounds to control olive anthracnose caused by *Colletotrichum* species.
- First report of *Alternaria alternata* causing leaf blight in *Pistacia terebinthus* in Spain.
- Interaction between *Diaporthe ruficola* and *Neofusicoccum mediterraneum* causing branch dieback and fruit blight of English walnut in California and effect of pruning wounds to the infection.
- *Phytophthora oleae*, a new root pathogen of wild olives
- Trunk injection of fosetyl-aluminium controls the root disease caused by *Phytophthora cinnamomi* on *Quercus ilex* woodlands
- Identification and Characterization of *Neofabraea kienholzii* and *Phlyctema vagabunda* causing leaf and Shoot Lesions of olive in California
- Atoxigenic *Aspergillus flavus* isolates endemic to almond, fig, and pistachio orchards in California with potential to reduce aflatoxin contamination in these crops
- Characterizing *Beltrania pseudorhombica* the causal agent of pistachio leaf and fruit spot in Arizona
- Responses to hydric stress in the seed-borne necrotrophic fungus *Alternaria brassicicola* (aceptado con revisión)
- Extract of *Mimosa tenuiflora* and *Quercus robur* as potential eco-friendly management tool against *Sclerotinia sclerotiorum* in *Lactuca sativa* enhancing the natural plant

defenses

- Field susceptibility of almond cultivars to the four most common aerial fungal diseases in southern Spain.
- Effects of cultivar susceptibility, fruit maturity, leaf age, fungal isolate and temperature on infection of almond by *Colletotrichum* spp.
- Ecology and epidemiology of diseases of nut crops and olives caused by *Botryosphaeriaceae* fungi in California and Spain.
- A non-pathogenic strain of *Fusarium oxysporum* as a potential biocontrol agent against *Verticillium* wilt of olive.
- Phenotypic and pathogenic characterization of *Pseudocercospora cladosporioides*, causal agent of cercospora leaf spot of olives.
- Occurrence of grapevine trunk diseases affecting the native cultivar Pedro Ximénez in southern Spain.
- First Report of *Fusarium solani* Causing Stem Canker in English Walnut in Spain
- Etiology of Branch Dieback and Shoot Blight of English Walnut Caused by *Botryosphaeriaceae* and *Diaporthe* Species in Southern Spain
- The Role of Volatile Organic Compounds and Rhizosphere Competence in Mode of Action of the Non-pathogenic *Fusarium oxysporum* FO12 Toward *Verticillium* Wilt
